Portfolio.

Hi, I am Alejandra Segura

INDUSTRIAL | PRODUCT DESIGNER

ABOUT ME

I am a **Colombian** designer based in Milan.

My professional career started by studying Industrial Design in Bogotá-Colombia. I then moved to Milan, where I achieved with honors the **Master degree in Product Design** at Domus Academy.

After graduating, I showcase a personal project at Milan Design Week 2019 called "Armonia Structure Design", this project won an **A'Design Award in Furniture and Homeware design category**.

During my professional career, I have had the opportunity to work on different design projects related to Research and Analysis, Product Strategy, Concept Development, Branding Positioning, and Packaging.

I collaborated with companies such as **De'Longhi, Whirlpool Corporation, The European Commission, and Wood-Skin**, among others.

Design is my passion, motivation, and my way to continuously **contribute to creating a better world in which design solutions are well thought, purposeful, functional and of good quality**. Thus, the users can proudly make them part of their lives and their stories.

Humidifier

Design Proposal for De'Longhi "Comfort" Product Category

As one of the main clients of FOM Studio, **De'Longhi involves us in a wide range of projects for all its three product categories: Comfort, Coffee, and Cooking.** In this project, our design team was tasked with expanding the Comfort Product Category by **creating a new product line of humidifiers, following De'Longhi Design Language and Product Specifics.**

During my role as an Industrial and Product Designer, I was involved in all phases of the project, starting from the Research Phase to the Design Proposals. Specifically, **I supported the initial Analysis, Concept Development, creation of 2D and 3D Design Proposals, Renderings, and the Final Presentation. Additionally, I facilitated cross-functional communication between De'Longhi's Marketing, Engineering, and Design departments.**

*Please note that due to the signed Non-Disclosure Agreement (N.D.A.), the final proposals for the next development phase are not displayed on these pages. Also, sensitive information about engine parts and further research insights is not disclosed.

Silhouette

**“La fioriera di design”
Hiro design competition.**

Silhouette is a series of indoor/outdoor **flowerpots crafted from metal**, a material that represents Hiro Independent's design identity.

The concept behind the design is its versatility, making it adaptable for various purposes, contexts, and styles, thanks to the accessories that can be integrated into the Flowerpot series.

Each Silhouette design consists of **two interlocking components that not only provide protection for the plant but also facilitate the extraction and relocation of the inner pot (in case the plant needs a transition between indoor and outdoor environments).**

The design also provides customization allowing users to tailor their flowerpot to their preferences and styles.

Eco-Packaging Design for Samsung and Dezeen Out of the Box Competition

Winemill is an elegant and modular wine rack designed for Samsung TV's Eco-package, "The Serif" and "The Sero." **Its concept aims to reduce waste by providing a way to repurpose corrugated cardboard television packaging into a new household item.**

This design offers dual functionality, serving as **wine bottle storage and an auxiliary table.** It is crafted to elevate the elegance of the cardboard, connecting two contrasting elements: the sophistication of wine, often likened to the nectar of the gods, and the practicality of cardboard, typically associated with low-cost packaging materials. **Winemill is a resistant, modular, and elegant second-life product.**

The hexagonal structure allows different Winemill units to be joined together while **maintaining the internal structure's stability and the safety of the wine bottles.**

ARMONIA

Armonia Structure Design, Chair collection

Armonia is a tubular structure created by the composition of two geometric shapes that are linked together to **remain in balance**. This balance **represents the harmony between two objects** and reflects this concept to the users since **a single structure is intended for two**. The union of two beings generates balance in life and harmony in the environment.

The structure is designed to shape a **functional, unconventional and iconic piece of furniture**. Its versatility gives life to a **collection of three different chairs**, easily adaptable to a variety of contexts. These designs help to highlight in a unique way the main element of the project, the structure, showing its tubular silhouette in a diverse and elegant way.

Internship at Wood-skin, Project Folio (Foldable Furnitures)

Folio is a series of **foldable furniture pieces made with innovative wood-skin technology**, recognized for its high level of customization through an intuitive online configurator.

During my curricular internship program, I played an important part in the Folio project. My role included supporting the Product Design Team by **creating 3D modeling patterns, producing renderings, developing foldable models, testing the prototypes of the main Folio designs, and contributing to the design of a packaging proposal for the Folio product line.**
